CHAPTER TITLE

Excel Basic+: Creating Business Reports Using Pivot Table & Power Pivot

VIDEO TITLE

Adding Targets Using Data Modelling in Power Pivot

- 1** Power Pivot is a data modeling tool for Microsoft Excel. It allows users to create relationships between tables and perform advanced calculations with large amounts of data.
- 2** To create measures, we can use the DAX (Data Analysis Expression) language.
- 3 Primary key:** It is a column or combination of columns that uniquely identifies each row in a table.
- 4 Foreign key:** It is a column or combination of columns that refers to the primary key of another table and establishes a link between the two tables.
